Art Unit: 3731

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 65-77 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansen (4,642,786). Hansen discloses first active marker (one of the retransmitters 20), second active marker (another one of the retransmitters 20, noting that a plurality of retransmitters at different targets are disclosed in col. 25, lines 27-40) and a detector (the receiver portion of the transmitter/receiver 11). Hansen fails to disclose the markers as having a diameter of 1-2 mm. However, Hansen discloses that the markers are very small and that the size disclosed is merely an example (col. 25, line 67 to col. 26, line 17). Further, it is old and well known in this art to make the markers as small as possible in order to obtain the advantage of making them less intrusive. It would have been obvious to make the Hansen markers of a size within the claimed range so that it too would have this advantage. As to claim 66, for example, Hansen fails to disclose an RF generator. However,

Art Unit: 3731

it is old and well known in this art to use an RF generator to generate an RF signal in order to obtain the advantage of making the signal detectable by receivers at a considerable distance. It would have been obvious to use an RF generator with the Hansen device so that it too would have this advantage.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 65-77 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 6,363,940 and claims 1-8 of U.S. Patent No. 6,698,433. Although the conflicting claims are not

Art Unit: 3731

identical, they are not patentably distinct from each other because the differences between the claims are obvious differences.
